DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities:

5 Re claim 1, line 3, substitute the first occurrence of "ID" with --ID (identification)--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the
10 basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign
country or in public use or on sale in this country, more than one year prior to the date of
15 application for patent in the United States.

2. Claims 1, 3-6, and 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by
Castleman (US 5,570,002).

Re claims 1, 6, 11, Castleman teaches a universal power supply system comprising
various devices which, can connect to the powers source 110 (see abstract; col. 4, lines 31+;
20 figure 2). Each device(s) include a device identification unit (col. 3, lines 31), a power input
device (col. 4, lines 40+); a universal power source 10/110 which supply power to the connected
device (col. 7, lines 31+). The power supply system 120 further includes a microprocessor 124
and memory 125 to accept identification information for each device and provide correct power
supply (col. 11, lines 28+).

Art Unit: 2876

Re claims 4, 5, 9 and 10, as shown in figure 1, the interface device 30 contains information terminal 34 and power terminals 36 which mates with power supply system 20 (col. 10, lines 17+).

Re claims 3 and 8, the voltage regulator 22/122 takes power from the power source, and produces stabilized voltages (col. 9, lines 43+) that are suitable for re-charging batteries of the connected devices (col. 2, lines 11+).

Re claim 12, the microprocessor of the system provides status of each outlets/ports and control power supply to the outlets (col. 16, lines 51+).

10

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

15

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

20

25

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 2 and 7 is are rejected under 35 U.S.C. 103(a) as being unpatentable over Castleman (US 5,570,002) in view of Batson et al. (US 6,400,043). The teachings of Castleman have been discussed above.

5 Castleman fails to specifically teach or fairly suggest that the power supply includes rechargeable battery and a charger.

Batson teaches uninterruptible power supply 10 comprising rechargeable battery 40, which can power electronics device 120 (col. 3, lines 11+; col. 6, lines 4+).

10 In view of Batson's teaching, it would have been obvious to an ordinary skill in the art at the time the invention was made to employ well-known rechargeable battery and charging system to the teachings of Castleman in order to provide uninterruptible power supply to the connected devices. Power source itself can be interrupted, which can affect operation of critical devices/processes. Moreover, sudden stoppage and resumption of power can physically damage the connected devices and valuable information therein. Accordingly, incorporating a battery-
15 powered source disclosed by Boston in addition to conventional power source is well within the ordinary skill in the art to supply uninterrupted power to the users systems.

Conclusion

20 I. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Hirano et al. (US 6,153,950); Kates et al. (US 6,191,552); Ramsier et al. (US 5,844,400); Shyr et al. (US 5,903,764); Ackerman et al. (US 5,461,561); Seigel (US 5,514,859) disclose universal power supply system or uninterrupted power supply system.
